

Task Sheet

1. Create a Simple Class

Task 1: Create a class called Book with one variable 'title'.
In the main method, create an object and assign a value to the title.
Print the title.

2. Class + Method

Task 2: Create a class called Calculator with a method add() that adds 2 numbers and prints the result. In the main method, create an object and call the add() method.

3. Constructor

Task 3: Create a class Student with a constructor that prints "Student created".
In the main method, create an object of Student and observe the output.

4. Class Scope Variable

Task 4: Create a class Laptop with a variable 'brand'.
Create two methods that print the brand using the same variable.
Access both methods using an object.

5. Object Creation Practice

Task 5: Create a class Mobile with a variable 'model' and a method displayModel().
Set model to "Samsung" and call the method using an object.

6. Multiple Objects

Task 6: Create a class Animal with a variable 'type'.
Create 2 objects of the class, set different types (e.g., "Cat", "Dog") and print them.

7. Access Modifiers (Basic Level)

Task 7: Create a class Person with a private variable 'age'.
Create a method to set age and another to print it.
Use getter and setter to access private variable.
